Executive Summary

Nassau Candy Distributor - Product Profitability and Margin Performance | Tabish Afzal | October 2026

This summary covers 10,194 order lines from January 2024 to December 2025. The aim was to find which products really earn money and which ones put margins at risk.

141,784	93,443	65.9%	95.1%
Total sales	Gross profit	Gross margin	Profit from 5 chocolate bars

What we found

- **Profit depends on the chocolate range.** Five chocolate bars give 95.1% of profit and 92.9% of revenue, with margins of 65% to 71%. The top three products alone give 59.3% of profit.
- **Some products sell but do not earn.** Kazookles has the 7th highest sales but only a 7.7% margin (price 3.25, cost 3.00). Lickable Wallpaper (50%) and Wonka Gum (52%) also earn clearly less than chocolate.
- **The "Other" division lags.** It makes 6.9% of revenue but only 4.7% of profit, at a 45% margin. Chocolate, in contrast, earns more profit than its share of revenue.
- **Margins do not change over time.** Every product has a fixed price and cost, so weak margins will stay weak until price or cost is changed. Sales grew 45% from 2024 to 2025 with the margin unchanged at about 66%.
- **Three small sugar products add almost nothing.** Fun Dip, Nerds and SweeTARTS have margins below 50% and give about 0.04% of profit together.

Recommended actions

1. **Kazookles:** renegotiate the unit cost or raise the price (a price of 4.25 would give about a 29% margin). Review the product if neither is possible.
2. **Lickable Wallpaper:** renegotiate the unit cost (10.00 on a 20.00 price).
3. **Wonka Gum:** raise the price to about 1.70 to reach a margin near the chocolate level.
4. **Fun Dip, Nerds, SweeTARTS:** review for discontinuation to simplify the range.
5. **Reduce dependency on chocolate:** protect supply from the two chocolate factories and promote the high-margin products that currently sell very little.

Note on the data

Only gross profit is available, so shipping, marketing and overhead costs are not included. Several Sugar products have very few orders, so conclusions on them are weak. The accompanying Streamlit dashboard lets readers change the date range, division and margin threshold to check these results.
